

4
Angelus Britannicus :

A N

E P H E M E R I S

For the Year of our Redemption

1680.

Being the Bissextile or Leap-Year, and
from the Creation of the World,

5629.

Amplified with

Astrological Observations from the

Sun's Ingress into *ARIES*, and the
other Cardinal Points; with an Account of the
Eclipses, Conjunctions, and other Configura-
tions of the Heavenly Bodies,

Calculated for the Meridian of *Lon-*
don, where the Pole Artick is Elevated
above the Horizon 51. Degr. 32 Min. but may
Indifferently serve for *ENGLAND, SCOTLAND,*
and *IRELAND.*

By John Tanner, Student in Physick and Astrology.

Agunt non Cogunt.

*Astra in Voluntatem hominis & liberum arbitrium
indirectè & per accidens agunt; dum directè
temperamentum significans & disponunt, sensusq;
in consensum trahunt.*

L O N D O N,

Printed by E. Harton, for the Company
of Stationers 1680.

Common Notes for the Year 1680.

January hath xxxi. days.

The New year doth begin as th^e old doth end,
 From time to time we hope that things will mend.
 The two Superiors with a loving Ray,
 Do seem all former mischiefs to allay;
 But yet we fear some lurking knaves there be,
 That still are hatching of more villany.

January 1680.

who list to view the motion of the skie,
 Oib' Planets congress, great variety
 will find, and an oft changing Air,
 Sometimes thick clouds, soon after clear and fair.
 High Winds, with Frost and Snow and Rain together.
 A fickle and inconstant winter weather.

The Peasants poor, whose hearts are well-nigh broke,
 Long bearing rough Bellona's heavy Yoke;
 With hope inflam'd their liberties to gain,
 And once as free-born Men to live again:
 But when we fondly flatter our desires,
 Our best conceits do prove the greatest lyers.

Month days.

The Sun and Saturn's dark and cloudy Rays,
Do so incline the Air for many days;
Cold Rain with blades of Snow withal:
Hermes with Mars cause sudden showres to fall.
The two Infortunes furious storms do send,
And makes March play the Lion 'fore the End.

Set on the top of Cancers Tropick; Jaine
would the rough bew'd, and hair brain'd Mars,
Joynd with Jove design intestine jays.
Let not just Heaven to chasten us be bent,
Left all convert to our due punishment.*

June 1680.

Month Days.

Of seven Conjunctions three first do declare
Good weather, and a very pleasant air;
Mars with great Jove do exercise their powers
In Thunder storms, soon after sudden Showers;
Then Saturn in Conjunction with the Sun,
Cause Rain, and dark Clouds fore the month is done.

July hath xxxi days

Heavens smiling face all sorrows would adjourn,
But such light hopes not lasting, their return
We fear, from murders rage 'tis a reprieve,
Not Europe freed, her troubles may revive:
Oft times 'tis seen, that in the loveliest bed
Of sweetest Flowers, a Serpent hides her head.

July 1680.

Month Days.

When Venus meets with Saturn, Clouds arise,
which cool the Air and darkeneth the skies,
which makes the Husband-man forbear, and stay
For fairer weather for to house his Hay:
But Jove and Hermes influx clears the Air
With wholesome gales, which makes the weather fair.

August 1686.

Month Days.

During the time the Infortunes are together,
You may expect unsettled stormy weather,
Threatning an ill reward to th' Plow-mans pain,
And makes him fear the housing of his grain:
The milder Stars do make a recompence,
Better the weather by their influence.

October 1630.

Month Days.

Mars and the greater Fortune clear the air,
And make the weather windy, dry and fair;
Which Saturn soon doth alter, for his ways,
Unto the Sun, cause dark and cloudy days:
Dark, cold and wet until the Fortunes ply,
And make the weather fairer, warm and dry.

Lunations and other observations. [Aspects & weather.]

1		Begins with fair and windy.

November hath xxx days.

By their dire influx are the Seas infested,
And those therein concerned much molested
With sudden Shipwracks, horrid Piracies;
Prodigious Storms, and tempests do arise:
The Sea forsakes her bounds, o'reflows the shoare,
By inundations: many evils more.

December 1680.

Month Days.

Venus with the Infortunes threaten Snow,
And Mercury doth make the winds to blow;
The weather varies oft, if you would know
The reason why, Heavens motions they are so:
The Sun opposeth Saturn, and doth send
Dark, cold and snowy weather at the End.

ASTROLOGICAL OBSERVATIONS

for the year, 1680.

MY Muse (*imploing great Apollo's skill*)
 Beg'd wisdom to direct her timorous quill,
 Smoothly to portray Europe's peaceful state,
 After dire and black storms, a serene fate.
 Whilst on a sudden smitten with surprise
 Of fresher storms, with fears and jealousies,
 Determined (after a little pause)
 Of prudent care not to transgress the Laws.
 To sing of peace, plenty, and pleasant things,
 Are wellcome unto Peasants, States and Kings:
 To add predicting threats to pannick fears,
 May pull great mischiefs down about thy ears:
 Still keep thy self within the safest way,
 For peace and quiet do thou ever pray.

Of the Use of the Almanack.

THE two first pages after the Title-page, need no explanation; the next two pages contain each of them 9 Columns, the first shews the month, the 2d. every 5 days of the month, the 3d. the hour and min. of Sun-rising every 5 days. The 4th. the Sun-setting. 5th. Length of the day. 6th. Length of the night. 7th. Length of the Planetary hour by day. 8th. By night. 9th. Quantity of twilight. The next 2 pages shew you the precise time of the Moons rising and setting, viz. the Moons rising from the full to the change, and her setting from the change to the full, which every intelligent Reader will perceive by bare inspection: note that M stands for morning, A for afternoon. The next is the left-hand page of the Almanack, which hath 11 Columns, the first containeth the days of the month, 2. the days of the week; 3. Festivals, the place of the Dragons head, and the latitude of the 5 Planets. The 4. the place of Saturn every day at Noon, and the Aspects of

of the Moon to him. The 5 the place of *Jupiter*, the 6 of *Mars*, the 7 of the *Sun*, the 8 of *Venus*, the 9 of *Mercury*, the 10 the place of the *Moon* in degrees and minutes every day at Noon: the last the latitude of the Moon. The right hand page hath only 3 Columns; the 1. the days of the month, 2. the change, full, and quarters of the *Moon*; the length, increase, and decrease of the days at some certain times: the rising and setting of some of the fixed Stars, with some few Chronological passages: The last contains the mutual Aspects of the Planets, with a brief account of the weather.

The two pages after the Almanack, shew you the exact time of the *Moons* coming to the South, which is done by inspecting the day of the month in the first Column, and the month on the head; and in the common angle or meeting, you have the hour and minute, either morning or afternoon, as the letter M or A doth denote: with which, and the Table following, the Tydes are most precisely known.

The Table of the Ports.	H. M.
<i>Queeneborough, Southampton, Portsmouth, Isle of Wight</i>	00 00

To find the time of High-water at any of these Ports, seek the hour and minute of the Moons coming to the South, to which add the hours and minutes against the Port, which giveth you the time of High-water. For example, I would know the time of high-water at *London-Bridg* on the first of *February* this year; the Moon comes to the South that day at 9 hours 44 min. afternoon; to which I add 3 hours, the number against *London*, and it produceth 12 hours 44 minutes, which is so many min. past midnight. By the same rule it is high-water at *Barwick* upon *Tweed*, at 29 min. past 3 morn; and at the *Needles* it will be full Sea at 29. min. past 7 morning; for by adding 9 hour 45 min. the hour and min. against the *Needles*, they produce 19 hours 29 min. from which deducting 12 ho. there remains the hours and min. as abovesaid. See how much later the *Moon* comes to the South the next day, and add one half of that to your former time, and it gives you the afternoon-tide that day. Note, that the Tide floweth one point of the Compass at the Spring-tides, viz. at the change and full, more than at the Neap-tides, viz. first or last Quarters. Boisterous Winds, and great Land-floods, may cause some variation, but this is the most exact rule that can be given.

With the Moons Southing also, you may find the ho. and min. of the night by the shadow of the Moon upon the Sun-dial thus. Repair to a Sun-dial, (when the Moon shineth) and see how many hours and minutes the shadow wanteth of the line 12, which take from the hours and min. of the Moons Southing, and the remainder is the hour of the night: But if the shadow be past the line of 12, add the hours and minutes to the hour and min. of the Moons Southing, and the sum is the hour and minute of the night.

Astrological Observations, 1680.

Of the Spring Quarter.

THis Quarter commenceth with the Suns entrance into the first scruple of *Aries*, equalizing the days and nights all the World over, (the Poles excepted); It produceth a more equal temperament in the Air, relaxing the pores of the earth, endowing it with a vivifying and generative virtue, quickening and giving life to the chilled and almost dead roots of vegetables. It happeneth this year on *Tuesday* the 9th of *March*, at 25 min. past 3 afternoon, at which time the Heavens appear as in the figure following.

Upon the summing up of the sortitudes and debilities that each Planet hath in the principal places of this figure, and in the figures of the full ☉ preventional, and new ☉ postventional; the Planet ☉ claims dominion, as having most dignities in the aforesaid places; likewise, he is angular in all the three figures, viz. and in a quartile to the New Star, place of the Sun at the

Astrological Observations, 1680.

the great Conjunction, and to the Conjunction of 1663. Bonatus saith, *Si fuerit ♄ in ♋ significat multitudinem nivis atq; pluvie, & erit mortalitas in partibus meridionalibus, & dirimentur regna, & significat interfectionem regum & magnatum, & divitum ac nobilium, scilicet qui sunt apti regno.* If ♄ be in ♋, it signifieth much snow and rain, and a mortality in the southern parts; divisions and contests between kingdoms and states, and slaughters of Princes and great men, rich men and nobles, that is, such as are apt to rule and govern. The propinquity of ♄ and ♀ shew many contentions and discords to happen among men, by bringing old matters and things upon the stage, which had for some considerable time lain occult or dormant. It signifieth many sorrows, much trouble and loss by the abounding of rogues, vagrants and cheaters, thieves, clippers and coyners of money more than ordinary; by which means the most honest and best of men are deceived. The wits of a very villanous and deceitful generation of Vipers now more than ordinarily active, to impede the honest and good intentions and indeavours of most of the powers in *Europe*. who would gladly put a period and conclusion to the differences and calamities under which they have so severely smarted. And though many of these evil members come to be discovered, and great and transcendent matters come to be more judiciously weighed than formerly, and a procurement of a settlement of many matters and things formerly in doubt and debate; yet the storm seems not to be quite over, but dark and dismal clouds seem to threaten the northern parts of the world with a storm, which God in his mercy divert, &c. *Si Mercurius fuerit in pisce, significat ventos, & pluviam. & accideat hac ut plurimum in partibus septentrionis:* It signifieth a windy and wet season, especially in the northern parts. The *Moon* from the North Angle in Aspect to ♄ and ♀, and the quartile rays of ☾ to ♄ in ☿, gives us cause to believe that the Spring will

commence, with windy, dark, cloudy and wet weather.
Of the Summer Quarter.

THIS Quarter commenceth with the *Sun's* entrance into the first scruple of the Tropick of ♄ making the longest days and shortest nights to all that inhabit that part of the world on the Noth-side of the *Æquator*. It happeneth this year on *Thursday* the 10th of *June*, at 6 ho. 18 min. past noon, the middle or equal time; but the apparent time is at 6 ho. 17. min. and 31 seconds, at which time the face of Heaven thus presents its self,

Midheaven \simeq 4 deg. 47 minutes.

Horoscope \nearrow 6 deg. 34 min.

According to the doctrine of the most approved *Astrologians*, the planet ♂ is to have the principal rule of this quarter also, a common sign occupying the Eastern Angle at the vernal *Æquinox*. Just upon the Summer Solstice we have ♄ joined with the Benevolent planet ♃ in the sign ♊, descending below the Western Horizon not distant much from the planets ♀ and ♁, they occupy the *medium cæli* of the vernal figure, although his position in *II Rixas movet*, &c. yet we have cause to hope that the benevolent nature of ♃ will so far meliorate the rougher nature of ♂, that we may hope for a right understanding between the people and their superiors; and we begin to hope that many do begin to act more honestly and publickly than formerly: yet many wise men fear a snake in the grass, by reason of a conjunction of the two malificks in this quarter, of which more anon. The configurations of the heavenly bodies this quarter doth seem to be auspicious (except the configuration before hinted of) and a probability of weather hot and serene, together with some showres and thunder, weather suitable for the season.

The conjunction of the two malevolent planets ♄ and ♂, which is celebrated this year on the 20th of *August*, is so worthy of the consideration of the ingenious, that I cannot pass it with silence: This

Astrological Observations, 1680.

This ☿ happeneth in a □ to the place of ☉ at the ☿ 1663. And ☉, at the time of this ☿, is in the like aspect to the Superiors, places at the great ☿, and to the place of the Moon also, which seems to design the effects to be the more considerable in the Northern parts of the world, which will be commotion^s, disturbances, notorious robberies, seditious conspiracies at Land, and more than ordinary piracies at Sea.

Considerable effects hath followed their conjunctions in ♄, they were conjoyned in the year 1562 to go no further backward; a plague in England. Queen Elizabeth slights the Popes offers, and stands upon her guard, &c. She and the Queen of Scots grew jealous of each other; the Moscovites invade Livonia; Duke of Guise slain, &c. Another ☿ in the same sign in the year 1592. The French King apostatizeth, turns Papist, so doth the Saxenians; and the Turks prevail against Hungaria. Erion O Rock a great Irish potentate, rebelled against Queen Elizabeth; and soon after Sir Oen assumed the title of O Neal, and rebels, &c.

1622, another ☿ in ♄, about which time the Jesuits were expelled the Netherlands; the Protestants abused in France. Soon after was the fatal downfall in Blackfriars at Hunsden-house, in which was killed the Priest, 100 of his Auditors, and many wounded.

In the year 1650 they were conjoyned in ♄ aforesaid: a war in Scotland began the same year, which is yet fresh in the memory of these three Nations. Beside,

Hæc norunt ☿ Tagus, ☿ Ganges forjan Antipodes. The consideration of the nature of this ☿ brings me unto the remembrance of a learned quotation of Mr. Lilly upon the like occasion: viz. *Ex deterioribus concursibus quæ in Cælo fiunt, est conjunctio Saturni ☿ Martis in Cancro: quoniam Saturnus cadit a domo, Mars ab exaltatione: ☿ Mars corrumpit effectus Luna, quæ ibi habet domum, ☿ Mars corrumpit effectus Jovis, quæ ibi exaltatur; Martis calor in signo astricto*

æstivo augetur, & saturni frigus propter Lunam; & est signum propinquissimum vertico nostro, & in quadrato Aspectu arietis, qui dominatur in Europa: est etiam signum, quod præ est mari, & morbis serpentibus, ut elephantiasi, & pravis Carcinomati & phagedenæ. The worst configuration that can be made in the Heavens, is the ☿ of ♄ and ☿ in ☾; because ♄ therein falls from his house, and ☿ from his exaltation; ♄ corrupts the influence of the Moon, who hath her house in that sign; and ☿ destroys the influence of ♀, who is therein exalted: the sign being Æstival, causeth the heat of ☿ to be more outrageous; and ♄ his cold is augmented, as it is the house of the Moon. This sign also is nearest to our Zenith, almost vertical over us, and beholds the sign ♊ with a quadrat Aspect, and ♊ hath much dominion in *Europe*: it is also a sign which signifieth the Sea, and hath dominion thereon, and on creeping or crawling diseases, as the Leprosie, Cankers, and such like diseases, such sores as run further and further, &c. *Scotland, Holland, Zealand, Burgundy, Russia, Prussia, Tunis, Algire, Constantinople, Venice, Millaine, Gexoa, Amsterdam, York, Cadez,* and many places more shall be subject to the many evils designed by this ☿, viz. wars, bloodshed, rebellions, insurrections, shipwracks, piracies, robberies, &c. If we have respect to the part of Heaven in the vernal figure where the ☿ falls, it is in the eleventh house, which intimates breach of trust, league and friendship, and the evils and mischiefs arising from such actions. To this agreeth the figure of the Luration preceeding the ☿, which ought to be the Radical figure, whose Ascendent is near the same of the Vernal figure, and the Luminaries upon the Cusp at the time of their *Sizygia*; which is as before minded in a ☐ Aspect to the great ☿ it self. Hence it must follow, that as the ☿ is naturally considerable and eminent, so it is accidentally very remarkable, and doth not only excite the influence of the great ☿ it self, and the ☿ of 63, and prepare matter for the next conjuncti-

ons, which will happen in 82 and 83, but do of themselves cause or stir up some notable transactions, sudden commotions, rebellions, war, uproars, murders, very violent and cruel enormities in those places that are under the sign in which they are conjoined; also great inundations of water, sudden shipwracks, piracies and Sea-robberies in such places fit for such accidents. To Princes it signifieth the treachery of their Subjects, great discontents amongst them; treacheries in treaties, breach of Leagues, the infidelity of their Allies and Confederates, breach of trust in their favourites and Servants, wasting their treasury. To conclude, let *Scotland, Holland, Zealand, &c* pray God to deliver them from a grievous and raging Pestilence, this year and the next, and from the devouring Sword; and pray that Religion suffer not by Innovations, which is to be feared, *viz.* a fatal Catastrophe.

Of the Autumn.

THE Autumn or Harvest quarter commeneth with ☉ entrance into the æquinoctial sign ♊, or the ballance, making the days and nights equal all the world over, the Poles excepted. It happeneth this year on *Saturday* the 11th of *September*, at 21 ho. 22 min. past Meridian or afternoon, according to Astronomical computation; but vulgarly on *Sunday* the 12. at 22 min. past 9 morning; at which time

The Mid-heaven is 18 deg. 3 min. ♎

The Horoscope is in 5 deg. 24 min. ♋.

Upon examination of the fortitudes of the Planets in the Hælejiacal places of the figure, ♄, ♀ and ☿ bear the principal rule and dominion; all the Planets are above the earth, yet all out of Angles; both the Malevolents afflicting the 9th house, which is the house of Religion. God deliver the places subject to the sign ♋ (which I set down before) from the Plague of Pestilence, or some other strange and epidemical disease; and may they receive the reward of Incendiaries, who in pretence of
zeal

zeal to Religion bring in any innovations, to raise disturbances, troubles and commotions, to the prejudice of the truly religious, or sober people, or peasants of any Nation or Kingdom. At the preventional full *Moon*, the maleficks are in the sixth house, the house of diseases, afflicting the bodies of men with such like diseases as are before-recited in the Summer quarter. The ☿ of ☉ and ♀, the ✕ of ♂ and ♀, and the other benign and favourable Aspects of the Planets among themselves, do betoken a very kind and pleasant season for Autumn: But the ☿ of ☉ and ♀ in the first week of *October*, give us dark, cold, cloudy weather, not without wet: Also the mutual Aspects signifie a very turbulent Air after the middle of *November*.

Of the Winter Quarter.

According to Astronomical computation, Winter takes its beginning when ☉ makes his entrance into the Tropick of *vs*, making the shortest day and longest night, and ☉ is in his furthest distance from us; which happeneth this year on *Friday* the 10th of *December*, at 27 min. past 9 at night: The face of Heaven is as followeth,

Mid-heaven 14 deg. 8 min. ☿

Ascendent 3 deg. 9 min. ♀.

We have the Planet ☿ going to an 8 of ♀, having lately been in the same Aspect with ♀, which do seem to furnish us with winds cold and unpleasant, thick clouds, and cold rain, some places snow, and such-like winterly weather. ☿ is stationary to Retrogradation, and immediately becomes Retrograde and into 8 with ♀ again, and aggravates much the influx thereby, whereby the weather is more uncomfortable most part of *December*, than it is like to prove in *January* or *February* following: yet the middle of *February* is like (by the influence of *Saturn* and *Venus*) to be accompanied with dark Clouds, if not a great fall of snow and rain.

Astrological Observations, 1680.

Of the Eclipses this year, 1680.

TWICE this year will the more noble Luminary of Heaven, viz. The *Sun*, suffer an Eclipse, or be darkened from the eyes of the earthly inhabitants, but not unto us.

The first is an Eclipse of the *Sun*, as aforesaid, on *Saturday* the 20th of *March*, between 10 and 11 of the Clock before noon; the Luration happeneth near the eleventh degree of γ the *Ram*; It is a central Eclipse, and near the south node of the *Moon*, and therefore a very great and considerable Eclipse in it self, but not to us, saith *Argol*; and so doth Mr. *Gadbury* in his *Ephemeris* this year. My occasions would not admit me time to calculate it, and therefore I shall not be positive whether any small matter of the defect may be visible unto us. To those that sail or inhabit in the South parts of *America* it will appear a total Eclipse, as far as the *Sun* can be totally Eclipsed. To them may the effects be as eminent, and though we see little or nothing of the obscuration, it is a great question whether we shall not feel the effects.

The other Eclipse of the *Sun* happens on *September 12*, at our eight of the Clock at night, therefore cannot be seen by us. It is in the beginning of the *Æquinoctial* sign *Libra*, and the effects are likely to be the more eminent.

Both these Eclipses being Central, neither of the Full *Moons* can be Eclipsed this year.

Certain necessary Rules for the Administration of Physick, Letting of Blood, &c.

THE Powers of the Body of Man are threefold, Natural, Vital, and Animal; the Natural power is seated in the Liver, governed by *Jupiter*, assisted by *Luna* and *Venus*; from this is bred the four Humours, *Blood*, *Choler*, *Phlegm*, *Melancholy*: Blood is made of meat perfectly concocted, in quality hot and moist, and is under *Jupiter*. Choler is made of meat more than perfectly

fectly concocted, it is the spume or froth of the Blood, hot and dry, under *Mars*. Phlegm is made of meat not perfectly digested, it is cold and moist in quality, under the *Moon* and *Venus*. Melancholy is the sediment of the Blood, cold and dry in quality, governed by *Saturn*.

The Natural Powers comprehend these four Administering Vertues, or Faculties, viz. Attractive, Retentive, Digestive, and Expulsive. The Attractive Faculty is hot and dry, under the influence of the *Sun* and *Mars*, fortified when the *Moon* passeth through *Aries*, *Leo*, *Sagitary*. The Retentive Faculty is cold and dry, under *Saturn*, strengthened, the *Moon* in *Taurus*, *Virgo*, *Capricorn*. The Digestive Faculty is under *Jupiter*, hot and moist, strengthened, the *Moon* in *Gemini*, *Libra*, *Aquary*. The Expulsive is cold and moist under the *Moon*, assisted by the *Moon* in *Cancer*, *Scorpio*, *Pisces*. In strengthening these Faculties, let the *Moon* be in one of these Signs, or let one of them ascend.

The Vital power is seated in the Heart, and is governed by the *Sun*; it is strengthened by his Medicines best, and is best done when the *Sun* is in Aspect of the *Fortunes*, viz. *Jupiter* and *Venus*.

The Animal Faculty hath its residence in the Brain, and is divided into Intellective and Sensitive. The first is under the influence of *Mercury*, the other of the *Moon*, and are both assisted by the benevolent rays of *Jupiter* and *Venus*.

The <i>Moon</i> in <i>Cancer</i> ,	$\left. \begin{array}{l} \Psi \\ \text{♀} \\ \odot \end{array} \right\}$	$\left\{ \begin{array}{l} \text{purge Melancholy} \\ \text{purge Choler.} \\ \text{purge Phlegm.} \end{array} \right.$
<i>Scorpio</i> , or <i>Pisces</i> ,		
In Sextile or Trine to		

To prepare the Humours, let the *Moon* be in *Gemini*, *Libra*, *Aquary*.

Take Clusters, the *Moon* in *Aries*, *Libra*, *Scorpio*.

Take Vomits, the *Moon* in *Aries*, *Taurus*, *Capricorn*.

Take Gargarisms, the *Moon* in *Aries*, *Cancer*.

Purge the Head by sneezing, the *Moon* in \odot ♊ ♋
Stop

Astrological Observations, 1680.

Stop Rheumes, the *Moon* in *Taurus*, *Virgo*, *Capricorn*
For Bathing, let the *Moon* be in Signs contrary to the
Nature of the Disease: Sweat two or three days after
the Change, or about the Full Moon, and let the *Moon*
be in *Aries*, *Leo*, or *Sigitarus*.

The Season for Bleeding is at Spring or Fall.

Let young people blood from the Change to the First
Quarter.

Bleed the middle-aged from the First Quarter to the
Full.

Elder age bleed from the Full to the last Quarter.

Old age bleed from the last Quarter to the Change:

Bleed the	{	Sanguine	{	The Moon in	{	♈, ♎, ♏
		Choleric				♊, or ♋
		Phlegmatick				♍, or ♌
		Melancholy				♐, or ♑

It is better if the *Moon* be in *Conjunction*, *Sextile*, or
Trine with the *Fortunes*, or the Planets in like Aspect one
with the other. The *Moon* in ill Aspect with the *Infor*-.
tunes, or the *Infortunes* so configured, forbid Phlebotomy:
Let not the *Moon* be in *Gemini* or *Leo*. Observe these
Rules, unless in the *Pleurisie*, *Frenzy*, *Squinancy*, or *Apo*-.
plexy, where Phlebotomy ought not to be neglected or
delayed.

And now my wearied Pen draws to an end,

And bids a farewell to my Country friend;

If true, this Globe of strife unsteady be,

Of the same humour we her dwellers see:

Heavens constant various motions do show,

Th' uncertainty that's certain here below.

My Pamphlets various entertainment finds;

Th' inconsistency that's constant in mens minds.

Now praise her portion is, dispraise by and by,

There's nothing constant but inconsistency.

But yet (my Muse!) unto thy Reader still,

Show thou the constancy of thy good will.

F I N I S.

ADVERTISEMENT S.

AN *Ephemeris* of the Cœlestial Motions and Aspects, with the Eclipses of the Luminaries for 20 years, by *John Gadbury* Student in *Physick* and *Astrology*; beginning *Anno* 1682, where his first part ends; the said first part beginning at the year 1672, and ending at the year 1682: both which are Printed for, and sold by the Company of Stationers.

This is to give notice, that all Chymical Medicines now in use, truly prepared, such as are safe and effectual in operation, and able to abide the most curious examens, are made and sold by *Christopher Pack*, at his house at the sign of the *Globe* and *Chymical Furnaces* in the *Postern-street* near *Moregate*; where for further satisfaction, any person may have a Catalogue of the same *Gratis*.

The true Spirits of *Scurvy-Grass*, both plain and golden, famous throughout the Three Nations, for their admirable Cures in the *Scurvy*, *Dropsie*, and several other general distempers, are faithfully prepared, and sold (with directions for the use of them) by the first Author *Robert Bateman*, at his House in *Pauls-Chain* near *Doctors Common London*; the Bottels are seal'd with the *Half-Moon* and *Ermins* to prevent Counterfeits: price 1 s. each Bottel.
